# Radiator protection concentrate Colour: blue

## **Description:**

**Driver Antifreeze NF** is a full concentrate radiator protection based on Monoethylene glycol for operation in summer and winter, with frost and rust protection effect (all-year operation).

**Driver Antifreeze NF**, the high-performance corrosion antifreeze protection for motors and cooling systems meets the modern demands of the development in motor construction.

Driver Antifreeze NF is free of nitrites, amines and phosphates.

#### **Properties:**

- Protection against corrosion for all parts of the cooling system made of the materials steel, gray iron, aluminium, copper, brass, soft solder.
- Avoidance of cavitation damages, such as on the collant pump
- Compatibility with varnishes
- Compatibility with hose and sealing materials
- Avoidance of sediments, which can cause radiator plugging
- Avoidance of foaming

#### **Application:**

Driver Antifreeze NF is because of its specially used additives excellently suitable for aluminium, light alloy and gray iron motors (please observe manufacturer's service instructions).

Recommended working concentration 50 % **Driver Antifreeze NF** and 50% water, by which a radiatior protection up to about - 38 °C can be achieved. Antifreeze protection down to -69°C is possible with a maximum of 68% **Driver Antifreeze NF** and 32% water.

Depending on the type and the manufacturer's instructions the contents of the cooling system shall be replaced every 2 to 3 years.
